

Report 2: Human Disease States Identified in Poster Texts

Analyst: AI (MiniMax M2.7, via Zo Computer)

Source: 27 raw OCR text files from Documents/OCR 1.1/Raw/

Date: 2026-04-28

Section A: Per-Poster Disease Table

Poster | Human Diseases Mentioned |

|—|—|

Avetisyan et al. (2023) | Autism; Autism Spectrum Disorder (ASD) |

Berbouti et al. (2025) | (*No human diseases identified in text*) |

Brown et al. (2025) | Acid Reflux / GERD; Metabolic Disorder |

Cabral et al. (2025) | Neurodevelopmental Disorder; Rett Syndrome |

Camara et al. (2025) | Alzheimer's Disease; Diabetes |

Dehuelbes et al. (2025) | Fatty Acid Metabolism Disorder; Metabolic Disorder |

Diaz et al. (2025) | Aging (related to disease) |

Ford et al. (2023) | (*No human diseases identified in text*) |

Gill & Alcazar (2025) | Mental Health Disorders |

Godoy-Pena et al. (2025) | (*No human diseases identified in text*) |

Haubelt & Alcazar et al. (2025) | Parkinson's Disease; Post-Traumatic Stress Disorder (PTSD); Schizophrenia |

Henriquez et al. (2025) | Inflammatory Bowel Disease |

Holmes (2025) | Neurodegenerative Disease; Parkinson's Disease |

Lemus et al. (2025) | Metabolic Disorder |

Logan et al. (2025) | Cancer (general) |

Luera et al. (2025) | (*No human diseases identified in text*) |

Meraz et al. (2023) | (*No human diseases identified in text*) |

Nii et al. (2025) | Liver Dysfunction |

Otala et al. (2025) | Cancer (general); Cystic Fibrosis; Fatty Acid Metabolism Disorder; Hypoglycemia; Liver Dysfunction; MCADD; MCADD (Medium-Chain Acyl-CoA Dehydrogenase Deficiency); Neurodegenerative Disease |

Paderna et al. (2025) | Oculocutaneous Albinism Type 4 (OCA4) |

Paramo-Ojeda et al. (2025) | Cancer (general); Colon Cancer; KRAS-Driven Cancer |

Pedireddi et al. (2025) | (*No human diseases identified in text*) |

Rodriguez (2025) | Aging (related to disease); Galactosemia; Metabolic Disorder |

Sakana et al. (2025) | (*No human diseases identified in text*) |

Trevino et al. (2022) | Peroxisomal Disorder; Zellweger Spectrum Disorder (ZSD) |

Tuttle et al. (2025) | Aging (related to disease) |
Zlaket et al. (2023) | Zellweger Spectrum Disorder (ZSD) |

Section B: Broad Disease Category Summary

Posters were also classified into high-level disease categories. A poster is counted in a category if it mentions **at least one** disease in that category.

Broad Disease Category | # of Posters | % of Total | Example Disease(s) |

|—|—|—|—|

Neurological & Psychiatric | 9 | 33.3% | Autism, Autism Spectrum Disorder (ASD), Neurodevelopmental Disorder, Rett Syndrome |

Cancer / Oncological | 4 | 14.8% | Cancer (general), Cystic Fibrosis, Fatty Acid Metabolism Disorder, Hypoglycemia |

Metabolic | 6 | 22.2% | Acid Reflux / GERD, Metabolic Disorder, Alzheimer’s Disease, Diabetes |

Digestive / Gastrointestinal | 24 | 88.9% | Autism, Autism Spectrum Disorder (ASD), Acid Reflux / GERD, Metabolic Disorder |

Inherited / Developmental | 4 | 14.8% | Oculocutaneous Albinism Type 4 (OCA4), Aging (related to disease), Galactosemia, Metabolic Disorder |

No Human Disease Identified | 7 | 25.9% | — |

Total posters: 27

Section C: Methodology Notes

Disease mentions were identified through keyword searching of the full poster text (excluding the Authors and References sections). Both specific disease names (e.g., “Parkinson’s Disease”) and general condition terms (e.g., “cancer”, “metabolic disorder”) were recorded. Where a poster mentioned multiple diseases in different categories, all applicable diseases were listed; percentages in Section B reflect unique poster counts per broad category and do not sum to 100%.
